

R E M A R K S

The feature of a freely rotating finned tube within each trap is clearly not shown in any cited reference.

It obviously is not to be found in Cunningham (A).

Turbeville (B) discloses a sealed drum 32, sealed to prevent the ingree of water, and motor propelled.

Marchionda (C) likewise teaches a power driven roller.

Miller et al (D) discloses a motor driven disc.

Hill (E) in no way suggests a rotatable member.

Newsom (F) shows rotatable accumulators which are motor driven.

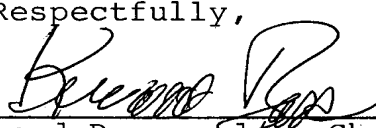

Barber (G) teaches a motor driven auger.

Russian citation (N) teaches a motor driven screw.

Russian (O) teaches a motor driven drum.

The free-wheeling feature of the tube within each trap is urged to make the new claim allowable, and favorable action is solicited.

Respectfully,
